29. NAME

ASSIP, Bacvs Ali Selcuk PVT TAFC 15461 (Turkish Army)

30. SUMMARY OF FACTS RELATING TO DEATH:

This 22 year old PVT, TAFC, male, was admitted to this hospital via helicopter at 1340, 29 May 1953, in deep shock, with an avulsive traumatic amputation of the right thigh and compound comminuted fracture of the right arm. Diagnosis: Wound Missile, head, thigh and arm, right #8255, Key Letter "C". 1. Within Command 2. Work 3. Negligence not apparent 4. Injured in action against an organized enemy of the United Nations. The patient was treated with positive pressure intra-arterial blood transfusions with intravenous dextran administration. A pneumatic tourniquet was affixed above the right thigh amputation. In 4 hours the blood pressure had sufficiently stabilized to allow severence of the distal leg in bed. The patient continued to advance into the crush syndrome with anuria developing about 36 hours after admission. A polyethylene catheter was placed in the vena cava through the left greater saphenous vein and fluids were withheld. Calcium gluconate, 50% glucose and insulin were administered in slow drop. The ECG which was bizarre began to show complex identification, and 4-6 cc of urine per hour were excreted. However, the renal ischemia and shock were so profound originally that the patient rapidly advanced through a uremic state to expire at 0750, 1 June 1953. Autopsy was performed.

AUTOPSY FINDINGS:

1. Amputation traumatic and surgical of right thigh
2. Wound missile right arm
3. Wound missile right scalp
4. Passive congestion of kidneys and liver
5. Contusion left frontal lobe

Autopsy Protocol, Standard Form (503) will be forwarded upon completion of autopsy.

Identification of remains established by medical records received with patient.

DEATH Is Not (*Is or is not*) THE RESULT OF OWN MISCONDUCT, AND Is (*Is or is not*) IN LINE OF DUTY.
